DETAILED ACTION

Claims 1-18 have been examined.

Oath/Declaration

The oath or declaration is defective. A new oath or declaration in compliance with 37 CFR 1.67(a) identifying this application by application number and filing date is required. See MPEP §§ 602.01 and 602.02.

The oath or declaration is defective because:
It does not identify the citizenship of each inventor.

It does not identify the city and either state or foreign country of residence of each inventor. The residence information may be provided on either an application data sheet or supplemental oath or declaration.

Claim Objections

Claims 16-18 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim should refer to claims in the alternative. See MPEP § 608.01(n). Accordingly, the claims are not been further treated on the merits.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Hansson (U.S. 6,023,620).

Per Claim 1:

The Hansson patent discloses:

- a) automatically send from an applications server (20) to the terminal (10) a digital data medium (31) containing the programming agent (36), based on the digital data of a first message initially sent from the terminal to said applications server (“...Referring now to FIG. 1, there is illustrated an apparatus for remotely downloading software into a cellular telephone. An update server processor 100 communicates with a cellular telephone network 120 which in turn provides wireless communication to a cellular telephone 110. ...” in column 2, lines 7-10)

- b) automatically extract, from the terminal (10), the programming agent (36) from the digital data media (31); c) automatically save the programming agent in the terminal (“...The update server processor 100 contains the new version of the software and controls the process for downloading the new software into the cellular telephone 110. ... When a new version of the software is available, the update server processor 100 transmits a message via the cellular telephone network 120 to the cellular telephone 110 offering the option to download the new version of the software. ...” in column 2, lines 10-15 and lines 40-45).

Per Claim 2:

The Hansson patent discloses:

- characterized in that the digital data medium (31) is a multimedia message of MMS type capable of containing image, text, sound and programming code data (column 2, lines 56-60).

Per Claim 3:

The Hansson patent discloses:

- characterized in that the first message is preferably an SMS type text message (column 4, lines 16-26).

Per Claim 4:

The Hansson patent discloses:

- characterized in that it also comprises a step of automatically displaying the programming agent (36) in an identified format, such as alphanumeric, or such as an icon (column 3, lines 25-40).

Per Claim 5:

The Hansson patent discloses:

- characterized in that the programming agent (36) is an encoded application program, placed in the digital data medium (31) (column 4, lines 27-31).

Per Claim 6:

The Hansson patent discloses:

- characterized in that a payment request for sending the digital data medium (31) containing the programming agent (36) to the terminal (10) is performed automatically, before the sending of said data medium to said terminal (10), said payment request being integrated into an automatic payment procedure like for example SMS/MMS Premium (column 4, lines 16-26).

Per Claim 7:

The Hansson patent discloses:

- characterized in that it also comprises a step of activation of the programming agent, to automatically perform the application corresponding with the encoded program (column 2, lines 41-55).

Per Claim 8:

The Hansson patent discloses:

- characterized in that the activation of the programming agent performs an automatic formatting, for example of an electronic postcard (column 2, lines 7-15).

Per Claim 9:

The Hansson patent discloses:

- characterized in that after the step of reception in the terminal (10) of the digital data medium (31) containing the programming agent (36), the digital data medium containing the programming agent is sent to at least a second terminal (18, 19) (column 2, lines 8-15).

Per Claim 10:

The Hansson patent discloses:

- characterized in that the code data of the programming agent (36) are automatically destroyed when the programming agent is deactivated (column 2, lines 40-48).

Per Claim 11:

The Hansson patent discloses:

- characterized in that the code data of the programming agent (36) are kept for a preset period, and automatically destroyed at the end of the preset period (column 2, lines 50-58).

Per Claim 12:

The Hansson patent discloses:

- characterized in that the preset period is included in the encoded data of the programming agent (36) (column 2, lines 41-45).

Per Claim 13:

The Hansson patent discloses:

- characterized in that the code data of the programming agent (36) are automatically destroyed after a preset number of activations of the programming agent (36) (column 2, lines 50-58).

Per Claim 14:

The Hansson patent discloses:

- characterized in that a request for executing imaging work is sent from the terminal (10) to a platform for executing imaging work (30, 40) capable of communicating with the terminal (10) (column 2, lines 7-15).

Per Claim 15:

The Hansson patent discloses:

- characterized in that the platform for executing photographic work is a photographic laboratory (30) or kiosk (40) (column 3, lines 60-65).
